Geocomputation: A Practical Primer

Geocomputation: A Practical Primer

Geocomputation is the use of software and computing power to solve complex spatial problems. It is gaining increasing importance in the era of the 'big data' revolution, of 'smart cities', of crowdsourced data, and of associated applications for viewing and managing data geographically - like Google Maps. This student focused book:

- Provides a selection of practical examples of geocomputational techniques and 'hot topics' written by world leading practitioners.
- Integrates supporting materials in each chapter, such as code and data, enabling readers to work through the examples themselves.

Chapters provide highly applied and practical discussions of:

- Visualisation and exploratory spatial data analysis
- Space time modelling
- Spatial algorithms
- Spatial regression and statistics
- Enabling interactions through the use of neogeography

All chapters are uniform in design and each includes an introduction, case studies, conclusions - drawing together the generalities of the introduction and specific findings from the case study application – and guidance for further reading.

This accessible text has been specifically designed for those readers who are new to Geocomputation as an area of research, showing how complex real-world problems can be solved through the integration of technology, data, and geocomputational methods. This is the applied primer for Geocomputation in the social sciences.

From reader reviews:

Lawrence Richardson:

In this 21st centuries, people become competitive in each and every way. By being competitive right now, people have do something to make these people survives, being in the middle of the actual crowded place and notice by surrounding. One thing that often many people have underestimated it for a while is reading. Sure, by reading a guide your ability to survive increase then having chance to stand up than other is high. To suit your needs who want to start reading some sort of book, we give you this particular Geocomputation: A Practical Primer book as starter and daily reading publication. Why, because this book is more than just a book.

Betty Abbott:

This Geocomputation: A Practical Primer usually are reliable for you who want to certainly be a successful person, why. The key reason why of this Geocomputation: A Practical Primer can be one of the great books you must have is usually giving you more than just simple reading food but feed an individual with information that might be will shock your earlier knowledge. This book is handy, you can bring it everywhere and whenever your conditions throughout the e-book and printed ones. Beside that this Geocomputation: A Practical Primer giving you an enormous of experience such as rich vocabulary, giving you demo of critical thinking that we all know it useful in your day activity. So , let's have it and luxuriate in reading.

Paul Howell:

The book untitled Geocomputation: A Practical Primer contain a lot of information on the idea. The writer explains her idea with easy approach. The language is very clear to see all the people, so do definitely not worry, you can easy to read it. The book was published by famous author. The author will take you in the new time of literary works. You can easily read this book because you can read on your smart phone, or product, so you can read the book throughout anywhere and anytime. In a situation you wish to purchase the e-book, you can wide open their official web-site and also order it. Have a nice learn.

John Hagen:

What is your hobby? Have you heard this question when you got pupils? We believe that that issue was given by teacher on their students. Many kinds of hobby, Everybody has different hobby. So you know that little person just like reading or as reading through become their hobby. You have to know that reading is very important in addition to book as to be the point. Book is important thing to include you knowledge, except your teacher or lecturer. You discover good news or update in relation to something by book. Numerous books that can you choose to use be your object. One of them is actually Geocomputation: A Practical Primer.
