Planning for Engineers and Surveyors (Pergamon international library of science, technology, engineering, and social studies) F. D. Hobbs, J. F. Doling

Planning for Engineers and Surveyors provides an understanding of the land use and transport planning context in which the work of engineers and surveyors was carried out. It attempts to explain what the planners of land use and transport did and why. It describes the problems which planners face, the reasons why they emerged, the techniques used to develop plans, and the political as well as the technical nature of planning.

The book begins with a definition of planning and a review of different popular beliefs about planners themselves. This is followed by separate chapters on the development of the planning system, including its history, institutional framework, and laws; the impact of social, economic, and physical environment on planning; and transport and communications planning. Subsequent chapters cover features of the planning process which are general to planning at different levels and of different sectors; the development of planning policies; the design implications and characteristics of a number of land uses; and the political character of planning.
