**Actor-Network Theory and Crime Studies: Explorations in Science and Technology** Dominique Robert, Martin Dufresne

Developed by Bruno Latour and his collaborators, actor-network theory (ANT) offers crime studies a worthy intellectual challenge. It requires us to take the performativity turn, consider the role of objects in our analysis and conceptualize all actants (human and non-human) as relational beings. Thus power is not the property of one party, but rather it is an effect of the relationships among actants. This innovative collection provides a series of empirical and theoretical contributions that shows:  $\phi$  The importance of conceptualizing and analyzing technologies as crucial actants in crime and crime control.  $\phi$  The many facets of ANT: its various uses, its theoretical blending with other approaches, its methodological implications for the field.  $\phi$  The fruitfulness of ANT for studying technologies and crime studies: its potential and limitations for understanding the world and revamping crime studies research goals. Students, academics and policy-makers will benefit from reading this collection in order to explore criminology-related topics in a different way.
