## **Extremum-Seeking Control and Applications: A Numerical Optimization-Based Approach (Advances in Industrial Control)** Chunlei Zhang, Raúl Ordóñez

Extremum-seeking control tracks a varying maximum or minimum in a performance function such as output or cost. It attempts to determine the optimal performance of a control system as it operates, thereby reducing downtime and the need for system analysis.

Extremum-seeking Control and Applications is divided into two parts. In the first, the authors review existing analog-optimization-based extremum-seeking control including gradient-, perturbation- and sliding-mode-based control designs. They then propose a novel numerical-optimization-based extremum-seeking control based on optimization algorithms and state regulation. This control design is developed for simple linear time-invariant systems and then extended for a class of feedback linearizable nonlinear systems. The two main optimization algorithms – line search and trust region methods – are analyzed for robustness. Finite-time and asymptotic state regulators are put forward for linear and nonlinear systems respectively. Further design flexibility is achieved using the robustness results of the optimization algorithms and the asymptotic state regulator by which existing nonlinear adaptive control techniques can be introduced for robust design. The approach used is easier to implement and tends to be more robust than those that use perturbation-based extremum-seeking control.

The second part of the book deals with a variety of applications of extremum-seeking control: a comparative study of extremum-seeking control schemes in antilock braking system design; source seeking, formation control, collision and obstacle avoidance for groups of autonomous agents; mobile radar networks; and impedance matching.

MATLAB®/Simulink® code which can be downloaded from [www.springer.com/ISBN](http://www.springer.com/ISBN) helps readers to reproduce the results presented in the text and gives them a head start for implementing the algorithms in their own applications.

Extremum-seeking Control and Applications will interest academics and graduate students working in control, and industrial practitioners from a variety of backgrounds: systems, automotive, aerospace, communications, semiconductor and chemical engineering.

As a scholar exactly feel bored to be able to reading. If their teacher requested them to go to the library in order to make summary for some e-book, they are complained. Just tiny students that has reading's heart or real their hobby. They just do what the trainer want, like asked to go to the library. They go to presently there but nothing reading seriously. Any students feel that examining is not important, boring as well as can't see colorful pics on there. Yeah, it is to become complicated. Book is very important for you. As we know that on this era, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. Therefore, this Extremum-Seeking Control and Applications: A Numerical Optimization-Based Approach (Advances in Industrial Control) can make you sense more interested to read.
